

ANALYTICAL BALANCES AS/X

release date 31-10-2012

Balances series AS/X represent standard level of analytical balances. They feature backlit graphic display. Measurement accuracy and reliability is determined by automatic internal adjustment/calibration system, triggered by time flow and temperature conditions.

The highlight of AS/X series is generation of GLP procedure in a form of printout from standard or custom configured report from balance adjustment/calibration process.

User accesses balance's weighing pan through a big weighing chamber with sliding top and side glass doors. Each balance series AS/X features RS 232 and USB output and additional display slot.

AS/X series offers the possibility of weighing loads outside the main weighing platform (i.e. under hook weighing). This means of measurement is an alternative for weighing loads with non-standard dimensions and shapes and those create magnetic field. Under hook weighing is also applied for density determination procedures.
